Educationnalfoundation: Hai Phong University of Medicine and Pharmacy

Summary of new main scinetific contribution of the thesis

This is the first study on the situation of childhood injury and some drowning preventive intervention were conducted in two coastal districts of Binh Dinh province.

The study contributes to a better explanation of the reason for injury, especially child drowning, while the locality has been implementing an injury prevention program for many years.

The results of the study will give managers a number of recommendations and appropriate solutions to reduce the burden of drowning.
